PREFACE TO THE FIRST EDITION

A new compilation of Recipes for American Iced Drinks has for some time been urgently called for owing to former publications being now out of print. It would have been possible to obtain from fresh sources various Recipes, but after consideration it was thought better to reproduce those of a well-known Expert whose knowledge and experience it was felt could not well be improved upon, and to whom due acknowledgments are hereby tendered.

To these are added some Recipes of Non-alcoholic Beverages which may be found useful by a considerable class of customers. We are indebted for these to the well-known firm of Messrs. W. J. Bush & Co., Ltd., Ash Grove, Hackney.

Additional Non-alcoholic Beverages.

TO MAKE PLAIN SYRUP.

Take of finest refined sugar 6 lb.; add 2 pints of water. When all dissolved gently boil for one minute; withdraw the heat and remove the scum; gently boil up again for another minute and remove any further scum; then add sufficient cold water to make 1 gallon (about 3 pints of water will be required). This produces a syrup equal to about 47 Twaddell, its specific gravity 1.235, and is the strength generally

"SIMPLEX" FOUNTAIN,
WITH DOUBLE STREAM DRAUGHT-TAP AND SYRUP TAPS.

used by aerated water makers, and upon which the following recipes are based.

If a sugar be employed of such purity that no scum or only a small trace rise to the surface after boiling, it is preferable not to boil the syrup, but simply to boil the water to destroy any germs that may be present, and then whilst hot add the sugar, and, when dissolved, the other ingredients.

In order to assist the solution of the 6 lb. of sugar in the first 2 pints of water, a little heat may be used, not brought up to boiling point, but only until the sugar be dissolved.

DIRECTIONS FOR MIXING.

While the syrup is still warm add the citric or tartaric acid, and when dissolved add the colouring (previously thinned if it be a thick colouring by mixing with two or three times its bulk of warm water). When the syrup has cooled and is about lukewarm, add gradually the essence—stirring at the same time—then the French cream, preservative, and other ingredients.

These syrups are generally perfectly bright when made, but for various reasons they are sometimes cloudy after being mixed. When such is the case pass them through a filtering bag.

The quantity of flavoured syrup to be used is 1½ ozs. to the 10 oz. bottle, and, of course, half the quantity for splits.

CAUTION.—No matter how pressed the mineral water maker may be for the time, he must never bottle while the syrup is hot; it should be quite cold.

To prepare for fountain use, take five parts of plain syrup and add one part of concentrated fruit juice. If not enough heading add, say, 1 drachm of Foam Solution to a gallon.

FAVOURITE DRINKS.

Lemon, Orange, Raspberry, Strawberry, Vanilla, Pineapple, Kola, Cherry, Grape, Sarsaparilla and Lime Juice. Dose, 2 ozs. to a 12 oz. glass. Also coffee extract—made fresh from the berries.

GINGER ALE (AMERICAN).

(This is a very favourite drink in America.)

Take of plain syrup	1 gal.
Tartaric acid or citric acid ...	1½ to 2 ozs.
American ginger ale essence	2½ to 3 ozs.

GINGER ALE (AROMATIC) AERATED.

Take of plain syrup	1 gal.
Tartaric acid or citric acid ...	2 ozs.
Ginger ale colouring	to fancy
Essence of ginger ale (aromatic)	1½ ozs.
Soluble essence of capsicine...	1 drm.
(Equals about ½ oz. to 10 gals. syrup.)

It is impossible to state any regular quantity of colouring to be used, as it is sold from a very pale to a dark brown.

COUNTER FOUNTAIN.

GINGER ALE (BELFAST).

Take of plain syrup	7 pints
Water	1 pint
Tartaric acid or citric acid	2 ozs.
Sarsaparilla colouring (specially prepared)	1½ oz.
Essence of Belfast ginger ale	1½ to 2 ozs.	

The Sarsaparilla colouring is used to give the characteristic flavour and colour of the well-known Belfast ginger ale. It can be omitted if desired and ½ oz. ginger ale or Belfast colouring substituted.

GINGER BEER (AERATED).

(In glass bottles.)

Take of plain syrup	1 gal.
Tartaric acid or citric acid	2 ozs.
Soluble essence of Jamaica ginger	¼ to ½ oz.	
French cream	3 ozs. to every	
	25 gallons.	

If the ginger beer made thus be not hot enough, add 1 drachm (equals 1¼ ozs. to 10 gallons of syrup) of sol. ess. capsicine.

Both these forms make splendid aerated ginger beers.

If a cloudy ginger beer be required, in imitation of the brewed beer, use 2 ozs. of insoluble essence of Jamaica ginger (omitting the soluble essence of capsicine entirely), or the same form as above, but use an unfiltered essence, which W. J. Bush & Co. sometimes supply for this purpose.

LIME JUICE PHOSPHATE.

Draw 1 oz. of lime juice (Montserrat Lime Juice Cordial recommended) in an 8 oz. glass, give three or four dashes of phosphate, then add soda water without frothing.

N.B.—Remember that phosphate will mix with any acid, but not with sweet or cream drinks.

Use lemon flavouring for Phosphate, Orange or Saline or Calisaya Tonics.

MALTED MILK AND EGG.

(An Excellent Tonic.)

Break a new laid egg into a 12 oz. glass in presence of customer and transfer to shaker, add 2 ozs. of fresh milk, 1 oz. of vanilla syrup, and 2 teaspoonfuls of Horlick's Malted Milk; mix well in shaker, draw off iced soda water into shaker until it is nearly full; pour once or twice from shaker into glass to mix well and top off with grated nutmeg.

N.B.—Some prefer a little salt.

MALTED MILK (PLAIN).

As above, but without the egg.

NOTE.—The above can be served hot in winter by using hot water.

ORANGE CHAMPAGNE.

(This is a justly appreciated beverage.)

Take of plain syrup	1 gal.
Tartaric acid or citric acid ...	2 ozs.
Orange colouring	1 oz.
Essence of orange champagne ...	$\frac{3}{4}$ oz.
Soluble essence of orange ...	$\frac{3}{4}$ oz.
French cream	$\frac{1}{4}$ oz.

Lemonade colouring is frequently used, in which case take $\frac{1}{4}$ oz.

Take 1 oz. of sulphate of quinine solution (strength 4 grains to 1 oz.), add 1 oz. of plain cold water, put in a phosphate bottle.

QUININE TONIC.

Water	1 gal.
Tartaric acid or citric acid	$\frac{1}{4}$ to 1 oz.
Quinine tonic essence	3 ozs.

Take of plain syrup	1 gal.
Tartaric acid or citric acid	1½ oz.
Raspberry colouring, pale, about	¾ oz.
Essence of raspberry (non-concentrated quality)	3 to 4 ozs.
French cream	¼ oz.

If not required so bright in colour, use ½ oz. raspberry colouring and ¼ oz. of lemonade colouring.

SALINE DRAUGHT.

(Good tonic.)

Put two teaspoonfuls of saline into a 12 oz. glass, draw iced soda water until glass is half full, add 1 oz. of orange syrup; stir and handle quickly or it will froth over.

SIMPLE SYRUP.

To make, use 8 lbs. granulated white sugar to 1 gallon of boiling water.

N.B.—For cream drinks use one part of pure cream to two parts of milk, or for cheapness one part of condensed (Nestlé's) milk to two of milk.

SODA COCKTAIL.

Half fill the shaker with cracked ice, draw 2 ozs. of grape syrup and 1 oz. of plain syrup (or one teaspoonful of powdered sugar), put in the juice of half a lemon and give two dashes of acid phosphate; nearly fill the shaker with soda water; mix and strain into glass, add a slice of lemon or orange and a preserved glacé cherry. Serve with straws.

SODA AND MILK.

(Ask whether desired "Plain" or "Sweet.")

For plain, half fill shaker with cracked ice and add enough milk to cover ice; fill up with soda; stir with long spoon, put on strainer and pour into glass. If "sweet" be preferred, draw 2 ozs. of plain syrup into shaker when making.

STRAWBERRYADE.

Take of plain syrup	1 gal.
Tartaric acid or citric acid	1½ oz.
Raspberry colouring, about	¼ oz.
Essence of strawberry (non-concentrated quality)	2½ to 3 ozs.

STRAWBERRY ICE CREAM.

Take 1 quart of new milk, 1 pint of cream, 1 lb. of granulated white sugar, 1 quart of fresh strawberries (or preserved, when out of season), the white of 3 eggs, well beaten up, and add cochineal colouring to suit. Mash the strawberries in a colander, mix the pulp with the milk, cream and sugar, stir until all are dissolved and add the whipped eggs. Colour with one or two drops of cochineal and freeze in the ordinary way.

N.B.—It is necessary to use more salt with the ice in freezing "Strawberry Cream."

"TOWER" WHISKEY LEMON SOUR.

To the "Lemon Phosphate," page 72, add 2 ozs. (or ½ quartern) of good old whiskey.

N.B.—Whiskey can be substituted if desired in all phosphate drinks.

Water	2 pints.
Tartaric acid or citric acid	1½ oz.

(High-class—about 2 quarts—first quality.)

Take 2 quarts of milk, 1 quart of cream, 3 lb. of granulated white sugar, the white of 6 eggs, well beaten, 4 teaspoonfuls of best vanilla extract. Do not boil the milk; add the milk and sugar together and stir well until all is dissolved. strain through muslin, then add the cream and eggs, well beaten up, together with the vanilla extract. Freeze in usual way.

VANILLA ICE CREAM.

(Second quality—about 3 quarts.)

Take 2 quarts of milk, 1½ lb. of granulated white sugar, 4 eggs, 1 oz. of gelatine, 1½ oz. of vanilla extract. Pour the milk into an enamelled saucepan and put on the fire to boil, then remove; add the sugar gradually until all is dissolved and let it stand until cold; then add the eggs, well beaten up, together with the vanilla extract. Cut up the gelatine very small and dissolve in a little water for half an hour and when dissolved add to the above. After mixing strain through muslin carefully and freeze in the usual way.

TO MAKE WHIPPED CREAM.

Put half-pint of thick cream into a basin with two teaspoonfuls of fine white powdered sugar, one tablespoonful of fresh lemon juice, a pinch of salt, and the white of a large egg beaten to a froth; then set the basin in cold water and whisk briskly with patent egg beater for about ten minutes until a firm froth rises; put into glass bowl and set on ice. Use ladle to serve with, and put the whipped cream on all cream beverages.

EGG FLIP.

(See Ice Cream Flip.)

Repeat above, but put 2 ozs. of fresh cream instead of ice cream.

MINERAL WATERS.

In the manufacture of mineral waters it is very important that makers should use the respective salts after which the waters are named.

Large doses of bicarbonate of soda, potash, &c., such as are recommended in the British Pharmacopœia for Medicinal Mineral Waters, of course may be unpalatable or injurious to many if taken regularly. This is why, for ordinary trade, only 3 to 5 grains per bottle are recommended, while the medicinal should contain three times that quantity.

LITHIA.

POTASH WATER.

SELTZER WATER.

SODA WATER.

CARLSBAD.

HARROGATE.

VICHY.

N.B.—For each of the above Medicinal Waters a proper solution can be supplied.

HINTS FOR DISPENSERS.

The success of a Soda Fountain largely depends on skill, aptitude and civility.

Everything about it should be neat and scrupulously clean.

Syrup jars should be taken out at least once a week, the remainder of syrup passed through muslin, the jars washed out and refilled.

Straws should *not* be given for Egg Drinks unless asked for, but otherwise straws should be put into the glass when serving.

The Syrups made from the preceding Recipes are from pure Fruit Juices, and not with *Artificial* Essences.
